

Web-based packaging project management and pre-production approval

WebCenter is the ideal tool for **collaborating and communicating** between all partners in the packaging and printing supply chains. Work virtually, in real-time, with your internal creative, marketing, package design and engineering groups, external vendors and suppliers and internal personnel. From designers and sales professionals to IT and marketing experts, WebCenter brings products to market faster.

As your business grows, it's essential to get more done without increasing costs. WebCenter lets you review and approve documents, reduce and eliminate development cycles, and save time and money. WebCenter increases efficiency and eliminates wasted effort in your business so you can **get more done** with the same people.

With WebCenter, you can **manage projects** and documents from work, home, or an Internet café halfway around the world. WebCenter Projects can contain any type of document - CAD files, graphic files, spreadsheets, proposals, purchase orders, customer specifications - anything. WebCenter automatically **maintains versions** of every one of these documents, and allows selected documents to undergo an **approval cycle** supported by a fast and accurate online viewing tool.

Key benefits

- **Faster turnaround** time thanks to improved communication and collaboration. Give your employees, suppliers and customers access to projects, documents and information over the internet, in their native language.
- **Increases your margin** thanks to the reduction of proofing cycles and lead times: use online view, markup and approval tools in a browser-based viewer.
- **Increases efficiency** with a seamless integration with EskoArtwork's workflow components such as BackStage, ArtiosCAD, Odystar ... and with third-party applications through the Software Development Kit (SDK)
- **Improves quality** with a complete set of viewing and comparison tools. View packaging, view your data, combine CAD with graphics, detect differences between the documents...
- **Increases your response time** by providing service 24 / 7 to your departments, suppliers and customers.
- **Improves accountability** with regards to centralized data storage, version control and history tracking
- **Optimizes the use and reuse of CAD files** in different formats. It provides valuable feedback for the cost calculation of CAD designs (rule length, board properties, etc.)

A place for everything...

WebCenter is the one place where everything comes together. Now you have a view on all parts of your business. Structural design, graphic design, business information, or specifications: WebCenter has it all under control.

Check size, ink information, ink usage, or barcodes.

Interact with animated 3D models that show folding, sequencing and assembly instructions.

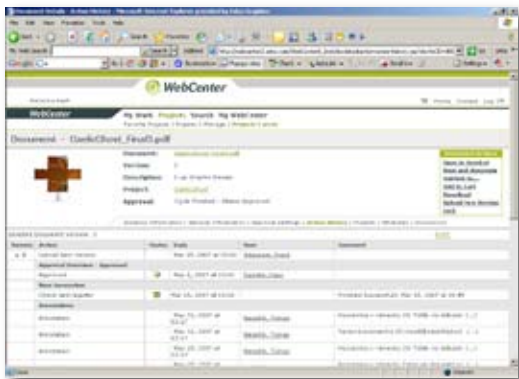

Search tools quickly locate information and files

The search tools in WebCenter make it easy to find projects and documents based on very specific metadata. Whether you want to find a label with a specific barcode, a package design using a specific ink, a structural design for a specific kind of board, a design brief from a certain customer... WebCenter will find it for you.

View and annotate the combination of CAD and graphics.

Control processes, speed up design and proofing cycles

Have errors caused by incorrect or outdated information ever cost you money? If you exchange digital information by email, CD or other digital media, you're already losing control of information and its history.

WebCenter's centralized database keeps your digital assets where they belong: in-house and under strict version control. Which version of the file is the most recent? Has it been reviewed and approved by everyone? WebCenter keeps track of everything.

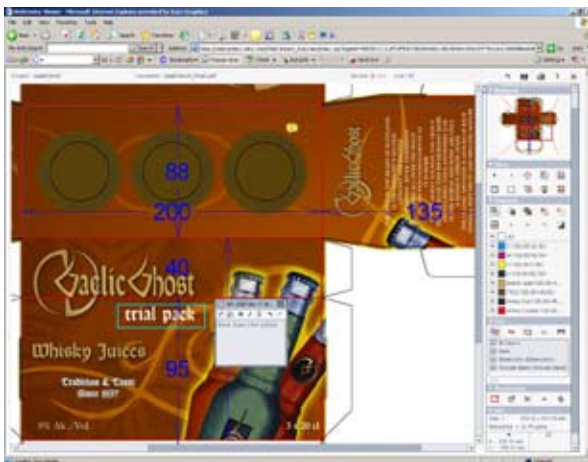

You will always know who made changes, and when, and why. The task management option allows splitting your projects into smaller manageable tasks for effective management and on time delivery. Create tasks, assign them to an owner and track their execution.

View, annotate and compare

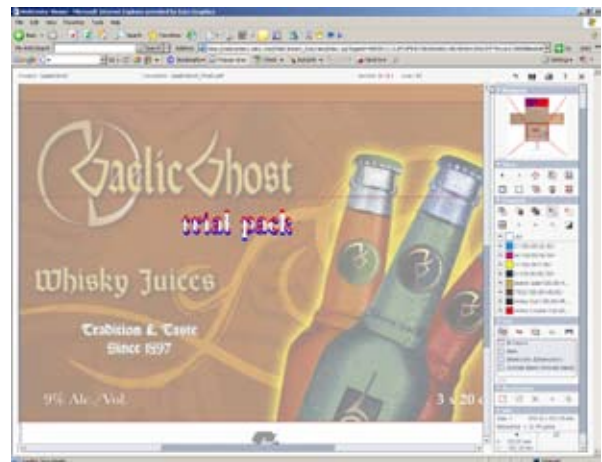

WebCenter keeps everyone on the same page by providing easy-to-use communication and collaboration tools.

You can view, markup and approve CAD files, PDF files and bitmap files online with the WebCenter's high-resolution Viewer. The viewer supports single page, multipage and imposition documents within the same viewing environment. Users can add comments, indicate corrections and interact with the files without the need for high-end, dedicated software. Using the Viewer, details can be measured, the document history can be consulted, approvals can be given, and when more than one version is available, the Compare tool highlights the difference. This is even possible on different versions of different documents, giving you the ultimate in quality assurance and error detection.

The WebCenter Viewer provides sophisticated tools to toggle separations and layers on and off, take measurements, and measure ink densities. The Measure Tool snaps to points for accurate measurement of widths, lengths, distances and angles, while the Densitometer accurately measures each ink percentage. The Notes Tool tracks who said what, and when. Multiple users can even setup a Collaboration Session where they all are "connected", viewing the same file with exactly the same view. As comments are made, all the other collaboration users instantly see the comments and corrections on screen in real time.

View and annotate multipage documents.

Connect with workflows

WebCenter seamlessly integrates with EskoArtwork's workflow solutions and provides integration with 3rd party applications through the Software Development Kit (SDK). This integration allows operators and suppliers to upload documents directly into the project without leaving their favorite environment.

WebCenter is ArtiosCAD's natural ally, the world's leading design software for folding carton and displays. You can upload files directly from ArtiosCAD into WebCenter, where the file will be displayed with all its metadata: rule length, blank size, flute, etc. This is both for one-up designs and for manufacturing designs. Any user, even without ArtiosCAD, can view and annotate the designs.

To further increase the availability of the designs they can be made available in a variety of downloadable formats, e.g. as a PDF for a graphic designer, or as a CFF3 for a diemaker.

Be secure and compatible

WebCenter puts security and confidentiality first. Your information and your files are completely safe. WebCenter permissions provide absolute control of a user's access to projects and documents. This way the right people have access to the right information. You can add more security by using secure certificates (SSL), which are fully supported by WebCenter.

The database and the application server are installed safely behind your firewall; the web server is installed in the demilitarized zone (DMZ).

WebCenter speaks many languages. Each user chooses their language, and WebCenter does the rest. English, French, German, Spanish, Italian, Chinese, Japanese, or Thai: WebCenter speaks them all.

By its very nature WebCenter can be used across time zones on the most common browsers on PC and Macintosh. For the administrators, WebCenter can be installed on standard hardware and integrated with existing database systems like MS SQL and Oracle.
