

ImageSolv™ DP Plate Washout Solution

ImageSolv™ DP Use on *any* equipment to wash out *any* plate material.

ImageSolv™ DP is our most versatile blend, as it can be used on any equipment to wash out any plate material. It works well on thicker plate material and is comparable to other commonly used solvents. With a much lighter scent than other solvents, it's much more pleasant to work around. ImageSolv DP will completely dissolve the mask layer and other laminated layers, which means fewer solids to clog up your processor. It is DOT rated as a non-hazardous material, so storage is not a problem.

- Low odor while processing
- Washout times comparable to similar products
- Masks and other layers dissolve quickly and completely
- Non-hazardous material (DOT) - safe high flashpoint
- Lower operating temperatures = energy savings
- Less solids to buildup in the processor
- Distillation parameters comparable to similar products
