

ImageSolv™ FD Plate Washout Solution

ImageSolv™ FD Balances efficient processing speeds and improved drying times.

ImageSolv™ FD was created to provide a balance between efficient processing speeds with improved drying capabilities.

ImageSolv™ FD is a low-odor blend that provides a pleasant working environment. It works well with all flexo plates—though our RI or DP blends would be a better choice for corrugated plate products due to their faster processing speeds. **ImageSolv™ FD** contains no RCRA Hazardous material and therefore requires no special handling or shipping requirements.

- Low odor while processing – finished plates have virtually no odor
- Washout times comparable to similar products
- Masks and other layers dissolve quickly and completely
- Non-hazardous material (DOT) - safe high flashpoint
- Lower operating temperatures = energy savings
- Less solids to buildup in the processor
- Distillation parameters comparable to similar products
