## TKM NEOFlex® Power

### NEOFlex Power – Engineered for High-Performance Flexo Applications

#### Maximize Efficiency. Minimize Downtime.

NEOFlex Power is a patented innovation designed to revolutionize doctor blade performance in flexographic printing. Say goodbye to unexpected machine downtime caused by premature blade wear.

With up to 40% reduced blade pressure, NEOFlex Power minimizes wear on doctor blades, end seals, and anilox rollers—helping to eliminate costly issues like scoring lines.

Its unique, slow-wearing material breaks down into a fine, non-abrasive powder that's gentle to your anilox rollers and extending their lifespan.

Thanks to its consistent ink transfer, NEOFlex Power eliminates back doctoring and dot gain—delivering clean, precise print results without the need for constant doctor blade pressure adjustments.

Boost your process reliability, cut downtime, and increase overall production efficiency.

NEOFlex Power sets a new benchmark for performance in the flexo printing industry.

#### Advantages

- Patented doctor blade technology
- Up to 40% reduced blade pressure
- Minimizes wear on blades, seals, and anilox rollers
- Fine, non-abrasive wear pattern
- Eliminates back doctoring and dot gain
- Consistent ink transfer
- Less downtime, higher efficiency
- Extended doctor blade and anilox roller life

#### Doctor blade shape

##### NeoFlex

#### Applications

Flexographic printing

#### Detailed dimensions

A (doctor blade width)	10.0 mm	–	40.0 mm
B (doctor blade thickness)	0.20 mm	–	0.25 mm
